

Egg Production Tracker

Log your flock's laying patterns to help spot health, nutrition, or stress issues early.

Weekly Egg Log

Date	Hen Name / ID	Eggs Laid	Shell Quality	Notes

How to Interpret Changes

- A sudden drop in egg numbers may indicate heat stress, illness, or stress.
- Soft or thin shells can point to calcium deficiency or heat-related issues.
- No laying during molting or extreme heat is normal.
- Consistent changes affecting one hen may indicate individual health problems.

Designed for Australian backyard chicken keepers. Use weekly to build a clear picture of flock health over time.
